

Sample Blue Bond Framework - Compliant Illustration

Use of Proceeds

Net proceeds will exclusively finance or refinance eligible projects supporting sustainable seafood value chains, including responsibly managed aquaculture and fishery improvement projects certified against recognised standards.

Process for Project Evaluation and Selection

An internal Sustainability Committee, comprising representatives from Treasury, Risk and Environmental Affairs, reviews and approves each candidate project against the eligibility criteria above before inclusion in the eligible project portfolio.

Management of Proceeds

Proceeds are tracked in a sub-ledger and allocated to the eligible portfolio within 24 months of issuance. Unallocated proceeds are held in cash or cash equivalents.

Impact Metrics

The issuer will report annually on: tonnes of certified sustainable seafood produced, hectares of marine habitat under improved management, and number of fishery improvement projects supported.

Reporting

The issuer commits to publish an annual allocation and impact report on its investor relations website until full allocation, and annually thereafter while the bond is outstanding.

External Review

A second-party opinion on this framework has been obtained from an independent sustainability ratings provider, and is available on the issuer's website.
